Igloo Shelters possess the following qualities that set us apart from the competition;

- High winds tolerance
- 750 GSM Fabric coated in PVC
- Reduced capital outlay
- Quick and simple to erect
- Fully Australian engineer designed
- Totally waterproof
- Able to handle snow loads
- UV proof

Our Shelters PVC coated Fabric covers come with a 10 year warranty alone. Rigorous testing has ensured that our product will stand up to the most severe weather conditions, From 45°C Central Australian Summers to the -30°C Thredbo snow season. Igloo Shelters can be completely open or fully enclosed by adding optional partial or full end walls.

The design of the *Igloo Shelter* allows not only for an efficient and inexpensive alternative, but makes them very easy to set up, dismantle and relocate! This is due to the bolt on rail system, which is used to mount the shelter to the top rail of a standard shipping container, using a standard twist lock mechanism which is fitted to each end of the mounting rail. All that is required are a few bolts along the mounting rail to securely fix it to the container, which eliminates the need for welding.

The Powder-coated Steel frame is erected with ease due to its simple sleaved design. High tensile Nuts and bolts secure the sections of the arch together which are labelled to ensure an effortless completion.

When you purchase an *Igloo Shelter*, it will come with all fittings, bolts and components. A detailed set of installation instructions are also supplied, allowing you to easily setup the shelter yourself, saving on installation cost. Alternatively, if required we can happily provided you with a quote for installation, just ask one of our friendly sales representatives for a price.
